Art Unit: 3682

The following is an examiner's statement of reasons for allowance: The prior art taken as a whole neither teaches nor renders obvious the combination of a roller element bearing assembly in which the lubricant disposed therein contains a plurality of suspended nanoparticles comprised of a metal or metal alloy that is more anodic than the metals of the first and second rings of the bearing. Moreover, the prior art taken as a whole neither teaches nor renders obvious a roller element bearing assembly in which a layer of nanoparticles film is disposed on a portion of a bearing raceway, wherein the nanoparticles film is comprised of a plurality of metal or metal alloy nanoparticles that are more anodic than the metal or metal alloy of the raceway. The prior art also fails to teach or render obvious a method of lubricating a rolling element bearing including the steps of disposing within the channel a lubricant containing a plurality of suspended nanoparticles comprised of a metal or metal alloy that is more anodic than the metal alloy of a raceway in which a nanoparticles film is formed from the suspended nanoparticles of the lubricant. The prior art also fails to teach or render obvious a device having first and second components in sliding or rolling contact formed of first and second metals or metal alloys, in which a layer of nanoparticles film is disposed on one of the components, and in which the nanoparticles film is comprised of a plurality of metal or metal alloy nanoparticles that are more anodic than the metal or metal alloy of the component.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
